Jupyter Notebook

Project: Enterprise Customer Churn Prediction & Advanced Artificial Intelligence Analytics

Student: JATIN

This PDF is a readable export of the notebook cells. Run the original .ipynb file in Jupyter to execute the analysis.

Synthetic practice data is used; this is not validated real-world analysis.

Enterprise Customer Churn Prediction & Advanced Artificial Intelligence Analytics

Prepared by: JATIN

Important: this notebook uses generated synthetic practice data, not real customer records. Do not report its metrics as real-world performance.

Run the project

Upload `churn_prediction.py` and run the next cell. The script saves charts and metrics in `outputs/`.

Code Cell 3

```
!pip -q install numpy pandas matplotlib scikit-learn
!python churn_prediction.py
```
